

MARINE CONTROLS AND STEERING

DAME OVERALL WINNER

Focus on stabilisation

"The stabiliser's 24V DC servo, its 360° rotating fin (to combat anchor walking), its failsafe fin attachment (design to preserve hull integrity in case of a strike) and its full integration with interceptor trim devices would each be worthy of consideration on their own."

METS 2015 DAME Design Award Jury

• NEW 2015 - Electric stabilising fins

Our new unique fin & interceptor system features 24V DC electric actuated fins integrated with our interceptors for a truly full stabilisation package setting a new standard for boats and yachts. The new revolutionary package stabilises from zero to full speed. An all speed stabilisation system.

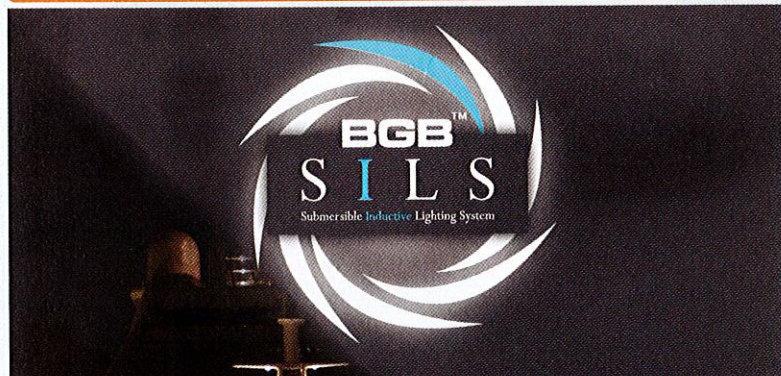

• NEW 2015 - X-Series

Our new standardised premium quality interceptor series with 50mm stroke that is needed to control boat list effectively. The X-series sizes are suitable for boats from 25ft to 60ft. The electric actuated interceptors are impressively the fastest moving interceptors on the market and features Automatic Trim as standard. Automatic List, Coordinated Turn and the advanced roll and pitch motion reducing system ACTIVE Ride Control can be added as option.
