BGB SILS

BGB SILS is a revolutionary new company entering the underwater lighting market. With no drilling or penetration of the hull required, the new Submersible Inductive Lighting System (SILS) is about to take the superyacht market by storm. SILS uses induction contactless technology to power the RGB-W LED light clusters meaning no more holes in the hull. Plus, the units can also be retro fitted. A world's first in the industry. Available from Spring 2016, SILS is fully controllable by phone or tablet device via a bespoke BGB app.

YMCA

YMCA was created to meet the challenges posed by increasing complex regulatory standards. Their range of services coordinated with a network of international maritime and tax lawyers and experts make YMCA one of the most versatile and professional player in the industry today. Operating a commercial or private yacht in European waters requires careful navigation especially with regards to Custom and Tax issues. In addition, many transactions are subject to VAT: making the wrong decision can have serious financial consequences. YMCA have close relations with French customs and tax agencies, on the ground capability and years of industry experience. They know how to make compliancy simple and keep it that way.
