

Issue M16c 29.10.15

BGB SILS

Submersible **Inductive** Lighting System

Smart Phone and Tablet Interface

The Submersible Inductive Lighting System can be fully controllable via a mobile device such as an iPhone, Adroid or IPad. The device can control the colour mix, dim, white and RGB effect.

SILS has an inbuilt BGB control system to manage colours via a unique bespoke BGB App downloadable via the iTunes App Store or Google Play Store (for Android).

The user can choose from an ultimate choice of colours to match moods, water conditions, fishing patterns or just for fun. Customers can also upload their pictures to the @bgb_sils twitter site and www.bgbsils.com "Gallery" section of the webpage. The unit also allows the user to programme their own light sequence via the App.
